

- The NTX TurboNozzle is designed for ease of installation on any ceiling or wall surface after all other mechanical and architectural work has been completed—no interference with other hidden or exposed items during the construction process, and therefore no cause for delays. Because of the light weight aluminum construction, the NTX TurboNozzle requires no special hangers.
- For direct tap installation at the duct the NTX TurboNozzle can be screwed directly to the duct.
- The NTX TurboNozzle is simply installed using no special tools or techniques—only a screwdriver is required.
